Pre-Purchase Examination
Donald Savage, DVM

This examination is being performed by the examiner for the prospective buyer. This is not a pass/fail situation. The horse's information, clinical examination, and laboratory results on this date will be evaluated by the examiner. After the exam, a list of normal or abnormal conditions the examiner feels are present and significant will be presented to the prospective buyer or their agent. After this information is presented it is the responsibility of the buyer to decide on the suitability of the animal for their needs.

Many subtle internal medical or musculoskeletal problems are difficult to diagnose or will go unrecognized on a routine prepurchase examination. Recurrent colics, "tying-up", low grade bronchitis, exercise induced pulmonary hemorrhage, pregnancy, impaired vision, recurrent uveitis, non-sweating, subclinical Cushing's disease, subclinical Lyme's disease, subclinical EPM, and subtle lameness are some of the occasional conditions missed on these examinations. If the buyer has ridden this horse in the occupation and at the intensity it is being purchased for, many of the above conditions could be recognized or ruled out.

Horse: Chocolate Majesty
Date: 10/01/2026
Sex: Gelding
Age: 01/30/2021
Breed: Rocky Mountain
Color: Chocolate

Current Owner: Double S Ranch
Giceli Machado

Intended Purpose: Basic Equitation
Heart and Lungs: WNL

Temperature: WNL
Pulse: WNL
Respiratory Rate: WNL
Nutritional State: WNL
Eyes: WNL
Ears: WNL
Temperament: WNL
Current Medications: N/A
Existing Medical Conditions: N/A
External Genitalia: WNL
Teeth: WNL
Is the horse a cribber? No
Is the horse a head shaker? No
Is the horse a weaver? No
Notes:

PHYSICAL EXAM OF LIMBS/RANGE OF MOTION

Right Foreleg: Palpation of superficial digital flexor tendon, deep digital flexor tendon, and suspensory ligament are all within normal limits. Joints palpated normally and range of motion was good. Hoof testers were negative on toes, quarters and heels. Shod in
Left Foreleg: Palpation of superficial digital flexor tendon, deep digital flexor tendon, and suspensory ligament are all within normal limits. Joints palpated normally and range of motion was good. Hoof testers were negative on toes, quarters and heels. Shod in

Right Hind Leg: Palpation of superficial digital flexor tendon, deep digital flexor tendon, and suspensory ligament are all within normal limits. Joints palpated normally and range of motion was good. Hoof testers were negative on toes, quarters and heels. Shod in

Left Hind Leg: Palpation of superficial digital flexor tendon, deep digital flexor tendon, and suspensory ligament are all within normal limits. Joints palpated normally and range of motion was good. Hoof testers were negative on toes, quarters and heels. Shod in

GAITS

Baseline Trot: Sound
Lunging to the Right: Sound
Lunging to the Left: Sound
